python读取yaml

<code python>

coding:utf-8

import yaml import os

作者：上海-悠悠 交流QQ群：588402570

获取当前脚本所在文件夹路径

curPath = os.path.dirname(os.path.realpath(**file**))

获取yaml文件路径

yamlPath = os.path.join(curPath, “cfgyaml.yaml”)

open方法打开直接读出来

f = open(yamlPath, ‘r’, encoding=‘utf-8’) cfg = f.read() print(type(cfg)) # 读出来是字符串 print(cfg)

d = yaml.load(cfg, Loader=yaml.FullLoader) # 用load方法转python dict, 需要指定一个Loader，否则会报warning print(d) print(type(d))

</code>
