

基本传输类型

Memory Transactions

- Read Request/Completion
- Write Request
- AtomicOp Request/Completion

支持64位和32位地址。

I/O Transactions

仅仅只是为了与传统legacy设备进行兼容，后续都不建议使用IO传输

- Read Request/Completion
- Write Request/Completion

只支持32位地址模式

Configuration Transactions

主要用来访问**configuration registers** of Functions within devices

- Read Request/Completion
- Write Request/Completion

Message Transactions

used to support in-band communication of events between devices□

也可支持vendor message
