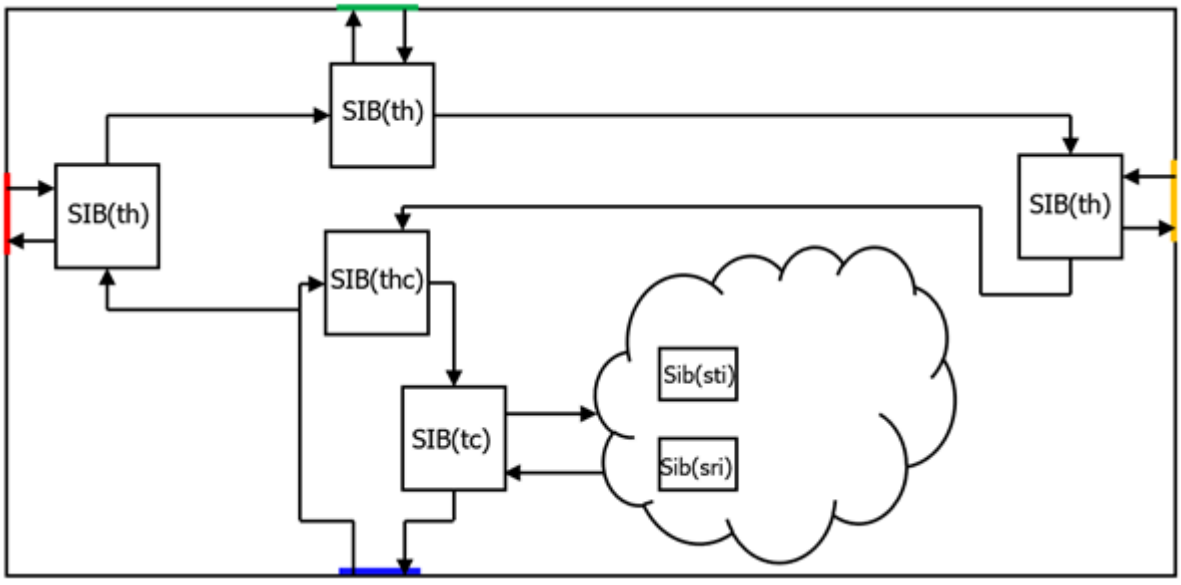
[-active_low_compliance_enables enable_port_name ...]
[-sri_sib_list sri_sib_list]
[-sti_sib_list sti_sib_list]
[-replace]
```

1.1 example 4

example 4



```
set_dft_specification_requirements -design_type tile
check_design_rules
set spec [create_dft_specification -tile_ijtag_host_list {left top right}]
report_config_data $spec
```

```
DftSpecification(tile_core,gate) {
  IjtagNetwork {
    HostScanInterface(ijtag) {
```

```
      Sib(tc) {
        Attributes {
          tessent_dft_function : tile_client_sib;
        }
        to_scan_in_feedthrough : pipeline;
        so_retiming : off;
        Sib(sti) {
          [...]
        }
        Sib(sri) {
          [...]
        }
      }
      Sib(thc) {
        Attributes {
          tessent_dft_function : tile_host_collector;
        }
        Sib(th_right) {
          to_scan_in_feedthrough : pipeline;
          SecondaryHostScanInterface(right) {
          }
        }
        Sib(th_top) {
          to_scan_in_feedthrough : pipeline;
          SecondaryHostScanInterface(top) {
          }
        }
        Sib(th_left) {

              connection(3) : tap_t/extest_train;
              connection(4) : tap_t/extest_pulse;
            }
            reset_value : 5'b00000;
          }
        }
        Sib(sri_ctrl) {
          Tdr(sri_ctrl) {
            Attributes {
              tessent_dft_function : scan_resource_instrument_dft_control;
            }
          }
        }
      }
    }
    HostScanInterface(tap) {
      Interface {
        tck : TCK;
        trst : TRST;
        tms : TMS;
        tdi : TDI;
        tdo : TDO;
      }
    }
    HostScanInterface(bscan) {
      Interface {
        design_instance : tap_t;
        scan_interface : H0;
      }
    }
  }
  BoundaryScan {
    ijtag_host_interface : HostScanInterface(bscan);
    BoundaryScanCellOptions {
      REF_CLK : clock;
      INCLK : clock;
    }
  }
}
```

2. get_config_elements

```
get_config_elements [name_patterns] [-hierarchical] [-in_wrappers
wrapper_object_spec]
[-partition partition] [-count] [-type type] [-filter filter]
```

```
[-regexp] [-nocase] [-silent]
```

假设spec如下：

```
tmp(1) {
  ABC (Def,2) {
    prop1 : 1;
    Prop2 : 2;
  }
  abc(def,1) {
  }
  abcdef {
  }

}
```

Case 1

This matches the wrappers with leaf name “abc” inside wrapper tmp(1) independent of whether it has an id. The matching is case-insensitive because only the id matching is case-sensitive.

get_config_elements abc -in tmp(1)

{/tmp(1)/ABC(Def,2) /tmp(1)/abc(def,1)}

Case 2

This matches the wrappers with the first id equal to “Def”. Notice that it does not match abc(def,1) as ids are matched considering casing unless the -nocase option is used.

get_config_elements *(Def,*) -in tmp(1)

{/tmp(1)/ABC(Def,2)} get_config_elements *(Def,*) -in tmp(1) -nocase

{/tmp(1)/ABC(Def,2) /tmp(1)/abc(def,1)}

Case 3

This matches elements below the top-level wrapper starting with a*.

get_config_element */a*

{/tmp(1)/ABC(Def,2) /tmp(1)/abc(def,1) /tmp(1)/abcdef}}

Case 4

This matches elements below the top-level wrapper starting with a* and having two ids.

get_config_element */a*(*,*)

{/tmp(1)/ABC(Def,2) /tmp(1)/abc(def,1)}}

Case 5

This matches elements starting with ‘p’ anywhere inside tmp(1).

get_config_element p* -in tmp(1) -hierarchical

{/tmp(1)/ABC(DeF,2)/prop1 /tmp(1)/ABC(DeF,2)/Prop2}

2.1 实例

它的这个（）括号是不匹配的，需要显式写出来。

```
ANALYSIS> get_config_elements *(*local*) -hierarchical   -in_wrappers $spec
{/DftSpecification(chip_top,rtl1)/IjtagNetwork/HostScanInterface(ijtag)/Sib(
sri)/Sib(sri_local)}
ANALYSIS> get_config_elements *local* -hierarchical   -in_wrappers $spec
{/DftSpecification(chip_top,rtl1)/IjtagNetwork/HostScanInterface(ijtag)/Inte
rface/tdi_local
/DftSpecification(chip_top,rtl1)/IjtagNetwork/HostScanInterface(tap)/Interfa
ce/tdi_local
/DftSpecification(chip_top,rtl1)/IjtagNetwork/HostScanInterface(bscan)/Inter
face/tdi_local}
```

3. get_name_list

此命令等同于

```
get_attribute_value_list object_spec -name name
```

用于将collection格式的name转换为普通tcl string格式的name

```
foreach pat [get_name_list [get_config_element Patterns -hierarchical]] {
  report_config_data $pat;
}
```

4. set_defaults_value

```
set_defaults_value DftSpecification/rtl_extension vb
set_defaults_value DftSpecification/use_rtl_cells off
set_defaults_value DftSpecification/MemoryBist/repair_sharing on
```
