

安装php70w

<http://www.thinkphp.cn/topic/48196.html>

以下是centos7安装php70w

1.安装epel-release

通过命令：

```
yum -y install epel-release
```

成功安装。

2.安装PHP7

终端再次运行如下命令：

```
rpm -Uvh https://mirror.webtatic.com/yum/el7/webtatic-release.rpm
```

成功获取PHP7的yum源，然后再执行：

```
yum install php70w
```

这样就大功告成了。

3.验证安装

终端命令 `PHP -v` 显示当前PHP版本，信息如下：

```
[root@localhost html]# php -v
PHP 7.0.33 (cli) (built: Dec 6 2018 22:30:44) ( NTS )
Copyright (c) 1997-2017 The PHP Group
Zend Engine v3.0.0, Copyright (c) 1998-2017 Zend Technologies
```

1. 使用

开启服务

```
systemctl start httpd.service
```

重启服务

```
systemctl restart httpd.service
```

停止服务

```
systemctl stop httpd.service
```

开机启动

```
systemctl enable httpd.service
```

取消开机启动

```
systemctl disable httpd.service
```
