python读取yaml

```python
# coding:utf-8
import yaml
import os
#作者：上海-悠悠 交流QQ群：588402570

#获取当前脚本所在文件夹路径
curPath = os.path.dirname(os.path.realpath(__file__))
#获取yaml文件路径
yamlPath = os.path.join(curPath, "cfgyaml.yaml")

# open方法打开直接读出来
f = open(yamlPath, 'r', encoding='utf-8')
cfg = f.read()
print(type(cfg))  #读出来是字符串
print(cfg)

d = yaml.load(cfg, Loader=yaml.FullLoader)  #用load方法转python dict, 需要指定一个Loader否则会报warning
print(d)
print(type(d))
```
